Questions:

Change your place (<https://lifehacker.com/change-up-your-study-spaces-for-better-recall-5631680>)

When presented with a scenario-based question, *read the kicker (Questions) first.*

If they give you information it is relevant to choosing between options, the most of the times.

If they don't give you a piece of information you don't needed it. Don't assume and do not add information that is not there.

Use process of elimination for every question. Look for how the answers self-eliminate

Read questions twice.

Use the “Mark for Review” feature.

Answers:

Use questions to answer other questions on the real exam.

You cannot assume additional services or configurations if not given

I suggest that you practice dissecting questions and answers with our practice exams (Dump Exams/Practice Exams).

Do the labs over a few times. but focus on why you are doing each step.
